

The Missing Peace UI and Product Update

The current build has a strong visual identity, but the product now needs to behave more clearly like a Wedding Planning Engine.

The design direction is working. Keep the cream background, warm clay buttons, serif headings, poetic eyebrow text, soft cards, and spacious layout. The product feels intimate, calm, and premium.

The main issue is that the product currently feels like separate planning forms. The next iteration should make every page feel connected to the Dream, Wedding Compass, and Peace Engine.

Required Navigation Update

Update the sidebar order to:

1. Dream
2. Peace Center
3. The Board
4. Decisions
5. Budget
6. Vendors
7. Guests
8. Timeline
9. Documents
10. Playlist
11. Honeymoon
12. Peace Notes
13. Settings

Dream must be first because it creates the meaning.

Peace Center must be second because it is the command center.

The Board remains the visual planning surface.

Landing Page Copy Update

Replace “Not a planner” language because the product is now positioned as a Wedding Planning Engine.

Recommended landing page copy:

The Missing Peace

Where forever begins.

A Wedding Planning Engine for the day, the people, the details, and the peace behind it all.

Primary button:

Begin your Dream

Secondary button:

I already have a Dream

Small note:

Free to dream. Invite your person anytime.

Peace Center Update

The Peace Center should feel like the living command center of the engine.

Required sections:

1. Wedding Compass Summary

Show the north star once Dream is completed.

Empty state:

Your north star will appear here once your Dream is set.

1. Dream Status

Show whether Dream is not started, in progress, waiting on partner, ready to reveal, Compass ready, or Compass approved.

1. Peace Score

Show one simple state:

Peaceful

A little to tend

Needs attention

At risk

1. Next Best Actions

Show three to five recommendations from the Peace Engine.

Each recommendation should have:

Title

Reason

Linked module

Suggested owner

Due date optional

Action button

1. Decision Queue

Show unresolved decisions.

Examples:

Guest count range

Venue direction

Budget ceiling

Child policy

Plus one policy

Food service style

1. Risk Radar

Group duplicate risks.

Do not show repeated warnings.

Example:

Guest count missing

This affects venue, catering, seating, invitations, budget, and timeline.

1. Vendor Gaps

Show missing core vendors based on planning stage.

Example:

Still needed: venue, caterer, photographer, officiant, florist.

1. Budget Pressure

Show missing budget, estimated budget, committed cost, and largest unknowns.

1. Guest Count Impact

Show how the guest count affects cost, venue, food, seating, travel, and timeline.

1. Recent Activity

Show who added, changed, approved, uploaded, or completed something.

Dream Feature Integration

Dream should become the opening product experience.

Dream should collect:

Individual partner reflections

Shared meaning

Emotional priorities

Planning values

Non negotiables

Things to avoid

Cultural or spiritual meaning

Food and hospitality meaning

Music and atmosphere

Family meaning

Budget values

The output of Dream is the Wedding Compass.

The Wedding Compass should power:

Peace Center

Next Best Actions

Compass Checks

Decision guidance

Budget guidance

Vendor priorities

Guest rules

Timeline suggestions

Vendors Page Update

The Vendors page should support status tracking.

Required vendor statuses:

Idea

Shortlisted

Inquired

Responded

Quote received

Comparing

Selected

Booked

Deposit paid

Fully paid

Declined

Unavailable

Each vendor should include:

Vendor name

Category

Website

Contact name

Email

Phone

Status

Quote amount

Contract status

Deposit due

Final payment due

Notes

Linked documents

Linked board items

Linked decisions

Guests Page Update

The household first structure is correct. Keep it.

Add guest planning rules:

Guest count range

Maximum guest count

Plus one policy

Child policy

Family priority groups

RSVP deadline

Meal choices

Dietary needs

Accessibility needs

Traveling from

Hotel status

Invited events

Thank you note status

Timeline Page Update

Split Timeline into two modes:

1. Planning Roadmap

Tasks, milestones, deadlines, dependencies, owners, and status.

1. Run of Day

Wedding day schedule, vendor arrival, ceremony, reception, photos, meals, speeches, music, send off, and vendor breakdown.

The Peace Engine should generate task dependencies.

Example:

Catering quote depends on guest count range.

Photography timeline depends on ceremony time.

Venue contract depends on final date.

Playlist Page Update

Keep Playlist. It adds emotional value.

Each song should include:

Song title

Artist

Link

Moment

Requested by

Approval status

Notes

Categories:

Ceremony

Cocktail hour

Dinner

First dance

Dance floor

Do not play

Honeymoon Page Update

Keep Honeymoon as optional.

It should be enabled or disabled per workspace.

Fields:

Destination

Status

Leaving date

Returning date

Budget

Wish for the trip

Activities

Restaurants

Hotels

Flights

Documents

Packing list

Decisions Page Update

Decisions should be elevated.

Each decision should include:

Title

Category

Options

Owner

Due date

Votes

Final choice

Status

Linked Dream value

Linked board items

Linked vendors

Linked budget items

Decision rationale

Statuses:

Open

Discussing

Needs vote

Needs planner input

Approved

Deferred

Rejected

Changed

Documents Page Update

Documents should support real planning records.

Each document should include:

Document name

Type

File upload

Linked vendor

Linked payment

Linked decision

Contract status

Expiration or due date

Notes

Document types:

Contract

Quote

Invoice

Mood sheet

Menu

Floor plan

Guest list

Legal

Insurance

Travel

Other

Product Direction

The next iteration should make the product feel less like forms and more like an engine.

Every page should answer:

What does this affect?

What is missing?

What needs deciding?

What is the next best action?

Does this match the Dream?

The visual design is working. Now the product logic needs to catch up.
