

The Missing Peace

Product Experience, User Journey, and Technical Specifications

1. Product North Star

The Missing Peace is an interactive, collaborative wedding planning board where couples, planners, and trusted collaborators can collect inspiration, organize decisions, manage budget, track vendors, coordinate guests, and plan the wedding from one beautiful shared workspace.

The board is the hero product. Everything else supports the board.

The core product promise:

“Turn wedding inspiration into a peaceful plan.”

The product should feel emotional, elegant, intimate, and calm. It should not feel like corporate project management software. The user should feel like they are entering a private creative studio for their marriage, not a spreadsheet with flowers attached.

2. Target Users

Primary user one: engaged couple planning their own wedding.

Primary user two: couple plus wedding planner.

Primary user three: planner managing multiple client weddings.

Secondary collaborators: parents, siblings, bridal party, close friends, venue coordinator, financial contributors.

Version one should support vendors as tracked records, not invited collaborators. Vendor communication can be recorded internally, but vendors should not have direct workspace access in the first release.

3. Positioning

The Missing Peace should be built for both consumers and planners from day one, but it should market first through the emotional couple use case.

Consumer positioning:

“A wedding board that becomes your plan.”

Planner positioning:

"A collaborative client workspace that turns scattered inspiration, budget notes, vendor details, and decisions into one clear wedding plan."

The product should avoid leading with marketplace language. The strongest wedge is not vendor discovery. It is clarity, collaboration, and decision conversion.

4. Core Product Principles

1. Board first

The board is the emotional center of the product. Users should be able to drag, drop, paste, upload, group, vote, comment, and convert inspiration into planning actions.

1. Every idea should be actionable

A pinned venue can become a vendor record. A catering photo can become a menu note. A color palette can become an approved design choice. A honeymoon TikTok can become a trip activity.

1. Planning should feel calm

The interface should reduce noise. No aggressive alerts. No chaotic dashboards. The tone should be soft, clear, and reassuring.

1. Collaboration should feel natural

Partners, planners, and collaborators should be able to work together from mobile, tablet, and desktop at launch. Real time presence, comments, approvals, and activity history are required.

1. Labels should be editable

Do not hard code bride and groom. Use editable partner labels from the start. Default labels can be Partner One and Partner Two.

1. Financial workflows should be planned but not active in version one

Budget tracking starts advisory. The architecture must reserve room for deposit tracking, payment reminders, invoice workflows, and payment processing later.

1. Guest facing wedding websites are not part of version one

The product stays private in version one. Guest facing website generation can become a future module using the same workspace data.

1. Honeymoon planning is optional

The honeymoon module should be opt in during onboarding or added later from the workspace.

5. Brand Direction

The Missing Peace should be built around the feeling of finding calm in the middle of chaos.

Possible brand language:

"Your wedding, finally in one peaceful place."

"Where the vision becomes clear."

"Plan the day without losing the peace."

"Every idea, decision, guest, vendor, and date in one shared place."

Visual tone:

Soft editorial wedding aesthetic.

Warm neutrals.

Pearl, cream, muted gold, soft sage, clay, blush, charcoal.

Subtle manuscript inspired details such as handwritten notes, margin annotations, chapter language, saved letters, private vows, and "peace notes."

Interface metaphors:

Workspace as a love manuscript.

Planning stages as chapters.

Important decisions as vows to the plan.

Saved inspiration as fragments.

Final approved items as "set in peace."

6. Main Navigation

The app should use a calm left or bottom navigation depending on screen size.

Primary areas:

1. Home

2. The Board
3. Budget
4. Vendors
5. Guests
6. Timeline
7. Documents
8. Decisions
9. Honeymoon, optional
10. Settings

On mobile, the bottom navigation should show Home, Board, Timeline, Guests, and More.

7. Onboarding Experience

The first session should ask only high leverage questions. The goal is to create a useful workspace within five minutes.

Step One: Create Wedding Workspace

Fields:

Wedding name.

Partner one label.

Partner two label.

Wedding date status:

Known date.

Preferred date range.

No date yet.

Planning stage:

Just engaged.

Exploring vision.

Venue hunting.

Vendor booking.

Guest list building.

Final details.

Wedding week.

Post wedding.

Step Two: Budget and Contributions

Fields:

Estimated total budget.

Budget confidence:

Firm.

Flexible.

Unknown.

Who is contributing:

Couple.

Partner families.

Specific contributors.

Other.

Budget priority ranking:

Venue.

Food and beverage.

Photography and video.

Attire.

Guest experience.

Decor and florals.

Entertainment.

Travel.

Honeymoon.

Cultural or religious elements.

Step Three: Destination and Venue Direction

Fields:

Wedding type:

Local.

Domestic destination.

International destination.

Undecided.

Possible cities or destinations.

Venue type preferences:

Ballroom.

Garden.

Beach.

Museum.

Restaurant.

Estate.

Backyard.

Religious venue.

Community space.

Industrial.

Other.

Indoor, outdoor, or mixed.

Weather contingency needed:

Yes.

No.

Unknown.

Step Four: Guest Count

Fields:

Estimated guest count.

Maximum guest count.

Household based invites:

Yes.

No.

Unsure.

Need child policy:

Yes.

No.

Unsure.

Need plus one rules:

Yes.

No.

Unsure.

Step Five: Planning Support

Fields:

Who is planning?

Couple only.

Couple with planner.

Planner led.

Family involved.

Need to invite collaborators now?

Yes.

Later.

Roles to invite:

Partner.

Planner.

Parent.

Wedding party.

Friend.

Contributor.

Viewer.

Step Six: Optional Modules

Toggle modules:

Honeymoon planning.

Pre wedding parties.

Cultural or religious ceremonies.

Gift registry tracking.

Legal and name change checklist.

Travel and lodging.

Step Seven: Generate Workspace

After onboarding, generate:

Starter board sections.

Budget categories.

Planning milestones.

Vendor tracker.

Guest list template.

Decision log.

Document folders.

Suggested next three actions.

8. Home Experience

The Home page is the calm command center. It should not be dense. It should show what matters now.

Sections:

1. Peace Score

A simple planning health indicator based on overdue tasks, budget confidence, vendor booking progress, guest list completion, and unresolved decisions.

Example states:

Peaceful.

Needs attention.

At risk.

1. Next Best Actions

Three to five recommended tasks.

Examples:

Finalize estimated guest count.

Compare top three venues.

Set floral budget range.

Invite your planner.

Create first guest households.

1. Budget Snapshot

Total budget.

Estimated committed.

Projected remaining.

Potential overage.

Top cost risks.

1. Vendor Progress

Booked.

Shortlisted.

Inquired.

Missing.

1. Decision Queue

Items needing approval or partner response.

1. Upcoming Dates

Payments, appointments, tastings, fittings, deadlines, RSVP dates, rehearsal, travel milestones.

1. Recent Activity

Who added, commented, approved, moved, uploaded, or converted items.

9. The Board Experience

The Board is the hero product and should feel closer to Pinterest plus Miro plus a wedding planner's binder.

Board Types

Every workspace has default boards:

1. Master Vision Board
2. Venue Board
3. Ceremony Board
4. Reception Board
5. Attire Board
6. Food and Beverage Board
7. Florals and Decor Board
8. Photography and Video Board
9. Guest Experience Board
10. Music and Entertainment Board
11. Stationery and Signage Board
12. Honeymoon Board, optional
13. Pre Wedding Parties Board, optional

Users can add custom boards.

Board Item Types

Supported item types:

Image upload.

PDF upload.

Link preview.

Pinterest pin embed.

Pinterest board embed.

TikTok link preview.

Instagram link preview where available.

Vendor website preview.

YouTube preview.

Screenshot upload.

Text note.

Color swatch.

File attachment.

Checklist card.

Decision card.

Vendor card.

Budget card.

Guest experience card.

Drag and Drop Requirements

Users must be able to:

Drag items anywhere on canvas.

Resize items.

Group items.

Stack items.

Pin items.

Duplicate items.

Delete items.

Move items across boards.

Convert item type.

Add comments to item.

Tag item.

Vote on item.

Mark item as favorite.

Mark item as approved.

Mark item as rejected.

Assign item to person.

Add due date.

Link item to budget, vendor, guest group, timeline event, or document.

Board Sections

Suggested starter sections:

Dream.

Maybe.

Shortlist.

Approved.

Booked.

Not now.

Questions.

Each section should be renameable.

The “Poof” Interaction

The user requested a magical “poof” style action. Use it as the conversion mechanic.

When a user drags a board item into an action zone or taps “Poof this,” a small menu appears:

Poof into vendor.

Poof into task.

Poof into budget item.

Poof into decision.

Poof into timeline event.

Poof into document.

Poof into honeymoon activity.

Poof into guest experience note.

Example:

User pastes a florist Instagram link. The app creates a rich card. User selects “Poof into vendor.” The app creates a vendor record with source link, notes, category, status as shortlisted, and a follow up task.

Board Collaboration

Required:

Live cursors.

User presence.

Currently viewing indicator.

Real time movement syncing.

Comments.

Mentions.

Reactions.

Approval requests.

Undo and redo.

Activity history.

Conflict handling.

Item lock when someone is editing text.

Offline read mode on mobile where possible.

Board Filters

Filter by:

Owner.

Category.

Status.

Tag.

Budget impact.

Vendor category.

Approved only.

Needs decision.

Recently added.

Source type.

10. Decisions Module

This is one of the most important differentiators.

Wedding planning becomes stressful because inspiration stays unresolved. The Decisions module turns ambiguity into progress.

Decision types:

Budget decision.

Guest decision.

Vendor decision.

Design decision.

Attire decision.

Menu decision.

Venue decision.

Timeline decision.

Family decision.

Cultural or religious decision.

Honeymoon decision.

Decision fields:

Title.

Description.

Category.

Status.

Options.

Votes.

Required approvers.

Due date.

Linked board items.

Linked vendor.

Linked budget item.

Final choice.

Decision rationale.

Created by.

Approved by.

Date approved.

Decision statuses:

Open.

Discussing.

Needs vote.

Needs planner input.

Approved.

Deferred.

Rejected.

Changed.

Every approved decision should be locked into the planning record but still editable with change history.

11. Budget Module

Version one is advisory, not transactional.

Budget features:

Total budget.

Budget confidence.

Contributor tracking.

Category budget.

Estimated cost.

Actual quoted cost.

Committed cost.

Paid manually tracked.

Remaining balance manually tracked.

Payment due date.

Deposit due date.

Final payment due date.

Notes.

Linked vendor.

Linked contract.

Linked board item.

Budget categories:

Venue.

Catering.

Bar.

Cake and desserts.

Photography.

Videography.

Planner.

Florals.

Decor.

Rentals.

Entertainment.

Officiant.

Attire.

Alterations.

Hair and makeup.

Stationery.

Signage.

Transportation.

Lodging.

Guest experience.

Favors and gifts.

Marriage license.

Insurance.

Tips and gratuities.

Emergency buffer.

Honeymoon, optional.

Pre wedding events, optional.

Budget intelligence:

Show projected overage.

Show unassigned inspiration that may create cost.

Show missing vendor categories.

Show high cost categories.

Show budget per guest.

Show budget confidence.

Show suggested tradeoffs.

Example:

"Your current guest count makes catering the biggest cost risk. Reducing from 150 to 125 guests may create more room for photography and florals."

Future financial placeholders:

Payment processing.

Vendor invoice upload and parsing.

Deposit reminders.

Shared payment responsibility.

Payment confirmation.

Stripe integration.

Bank account linking.

Tax and gratuity tracking.

Refund and cancellation policy tracker.

12. Vendor Module

The Vendor module is a private vendor cockpit.

Vendor categories:

Venue.

Planner.

Photographer.

Videographer.

Caterer.

Bar service.

Cake and desserts.

Florist.

Decorator.

Rental company.

DJ.

Band.

Ceremony musicians.

Officiant.

Hair.

Makeup.

Attire.

Alterations.

Stationery.

Signage.

Transportation.

Hotel or room block.

Travel advisor.

Honeymoon advisor.

Content creator.

Photo booth.

Childcare.

Pet attendant.

Security.

Insurance.

Other.

Vendor fields:

Vendor name.

Category.

Website.

Social links.

Contact name.

Email.

Phone.

Location.

Status.

Inquiry date.

Response date.

Availability.

Quote amount.

Package notes.

Contract status.

Deposit required.

Payment schedule.

Cancellation terms.

Insurance required.

Meals required.

Setup time.

Breakdown time.

Arrival time.

Departure time.

Linked board items.

Linked budget items.

Linked timeline events.

Linked documents.

Internal notes.

Vendor status:

Idea.

Shortlisted.

Inquired.

Responded.

Quote received.

Comparing.

Selected.

Booked.

Paid deposit.

Fully paid.

Declined.

Unavailable.

Archived.

Vendor comparison:

Compare three vendors side by side.

Fields:

Price.

Availability.

Style match.

Responsiveness.

Reviews.

Included services.

Travel fees.

Contract risk.

Planner notes.

Couple preference.

Final recommendation.

13. Guest Module

Guest management should behave like a hospitality CRM.

Data structure should support households.

Household fields:

Household name.

Mailing address.

Primary contact.

Relationship group.

Invitation status.

RSVP status.

Notes.

Guest fields:

First name.

Last name.

Preferred name.

Pronouns optional.

Email.

Phone.

Relationship.

Group.

Household.

Invited to ceremony.

Invited to reception.

Invited to rehearsal dinner.

Invited to other events.

Plus one eligibility.

Plus one name.

Child guest.

Meal choice.

Dietary restriction.

Accessibility need.

Traveling from.

Hotel status.

Transportation need.

Gift received.

Thank you note status.

Song request.

Internal notes.

Guest views:

All guests.

Households.

Needs address.

Invited.

RSVP pending.

Accepted.

Declined.

Meal counts.

Traveling guests.

VIPs.

Wedding party.

Family.

Children.

Accessibility needs.

Guest module should remain private in version one. No guest portal yet.

Future guest facing features:

Wedding website.

RSVP form.

Guest messaging.

Travel page.

Registry page.

Digital save the dates.

Digital invitations.

QR code check in.

14. Timeline Module

The Timeline module needs three views:

Planning Timeline.

Wedding Day Run of Show.

Guest Itinerary.

Planning Timeline

Generated based on wedding date or date range.

Task types:

Budget.

Venue.

Vendor.

Guest.

Design.

Attire.

Food.

Legal.

Travel.

Beauty.

Ceremony.

Reception.

Honeymoon.

Post wedding.

Task fields:

Title.

Description.

Category.

Owner.

Status.

Due date.

Priority.

Linked board item.

Linked vendor.

Linked budget item.

Linked document.

Reminder date.

Task statuses:

Not started.

In progress.

Waiting.

Needs decision.

Done.

Skipped.

Wedding Day Run of Show

Fields:

Time.

Event.

Location.

Responsible person.

Vendors involved.

Notes.

Private or shareable.

Emergency contact.

Setup and teardown.

Examples:

Planner arrival.

Hair and makeup.

Photography starts.

Partner portraits.

Ceremony.

Cocktail hour.

Reception entrance.

Dinner.

Speeches.

First dance.

Cake cutting.

Send off.

Vendor breakdown.

Guest Itinerary

Private for now, but structured for future website use.

Fields:

Event title.

Date.

Time.

Location.

Dress code.

Who is invited.

Travel notes.

Transportation notes.

Meal notes.

15. Documents Module

Users need a clean place for files.

Folders:

Contracts.

Quotes.

Invoices.

Mood Sheets.

Attire.

Menu.

Guest Lists.

Legal Documents.

Venue Documents.

Floor Plans.

Seating Charts.

Honeymoon.

Insurance.

Miscellaneous.

Supported uploads:

PDF.

Image.

Doc.

Spreadsheet.

CSV.

Text note.

Contracts should be linkable to vendors, payments, dates, and tasks.

Future AI document parsing:

Extract vendor name.

Extract payment schedule.

Extract cancellation terms.

Extract included services.

Extract deadlines.

Extract setup requirements.

Flag missing signatures.

Flag risky clauses for review, with legal disclaimer.

16. Honeymoon Module

Honeymoon is optional. It can be added during onboarding or later.

Features:

Destination ideas.

Travel dates.

Budget.

Flights.

Hotel.

Activities.

Restaurants.

Documents.

Passport reminders.

Packing list.

Itinerary.

Weather notes.

Health and travel notes.

Honeymoon board.

Honeymoon budget.

Honeymoon activity voting.

Honeymoon status:

Dreaming.

Shortlisting.

Planning.

Booked.

Ready.

Completed.

17. Profiles and Permissions

Every user has a profile.

Profile fields:

Name.

Display name.

Avatar.

Email.

Phone optional.

Role.

Partner label optional.

Notification preferences.

Workspace access.

Roles:

Owner.

Partner.

Planner.

Collaborator.

Contributor.

Viewer.

Admin.

Suggested permissions:

Owner:

Full access, billing, delete workspace, manage members.

Partner:

Full planning access, cannot delete workspace unless owner.

Planner:

Full planning access, manage tasks, vendors, documents, timeline, guests.

Collaborator:

Can add board items, comment, vote, complete assigned tasks.

Contributor:

Can view selected budget categories, comment, upload documents if allowed.

Viewer:

Can view selected areas only.

Admin:

Platform level support role, no access to private wedding data unless explicitly granted through support consent.

Version one should not include vendor workspace access.

18. Collaboration Experience

Required collaboration features:

Real time board editing.

Presence indicators.

Comments.

Mentions.

Role based permissions.

Activity feed.

Approval requests.

Decision voting.

Mobile participation.

Push notifications later.

Email notifications at launch.

SMS reminders optional in early version.

Notification examples:

You were mentioned.

A decision needs your vote.

A task is due soon.

A vendor payment date is approaching.

A board item was approved.

A collaborator joined.

A document was uploaded.

A budget item changed.

19. AI Features

AI should support planning clarity, not replace emotional choices.

Version one AI features:

Board item categorization.

Link summary.

Vendor comparison summary.

Budget risk summary.

Timeline generation.

Task suggestions.

Decision summaries.

Guest list cleanup.

Duplicate guest detection.

Honeymoon itinerary suggestions.

Document summary for uploaded contracts, with disclaimer.

AI assistant name idea:

Peacekeeper.

Concierge.

The Missing Piece.

I prefer “Peacekeeper” for the planning assistant because it fits the brand without being cheesy.

AI boundaries:

Do not write vows by default.

Do not make final decisions.

Do not give legal advice.

Do not give financial advice.

Do not represent itself as a wedding planner unless planner mode is enabled.

Do not contact vendors automatically in version one.

20. Data Model

Recommended database: Postgres with Supabase.

Core tables:

users

workspaces

workspace_members

member_roles

wedding_profiles

partner_profiles

boards

board_items

board_item_positions

board_collections

board_comments

board_votes

board_tags

uploads

Important Relationships

A workspace has one wedding profile.

A workspace has many members.

A workspace has many boards.

A board has many board items.

A board item can link to vendor, budget item, task, document, decision, event, or honeymoon item.

A vendor can link to budget items, documents, tasks, timeline events, board items, and payment milestones.

A guest belongs to a household.

A guest can be invited to many events.

A decision can link to many board items and require multiple approvals.

A budget item can link to vendor, task, document, and payment milestone.

21. Technical Architecture

Recommended stack:

Frontend:

Next.js App Router.

React.

TypeScript.

Tailwind CSS.

Shadcn UI or custom design system.

Framer Motion for subtle interactions.

Board rendering:

React Flow, Tldraw, or custom canvas.

Liveblocks for real time collaboration.

Zustand for board state management.

Backend:

Next.js server actions and route handlers.

Supabase Postgres.

Supabase Storage.

Supabase Realtime where useful.

Clerk for authentication and organizations.

Liveblocks for real time board state, presence, comments, and storage.

File handling:

Supabase Storage or S3 compatible storage.

Image optimization through Next.js image pipeline.

Link previews:

Server side link parser.

Open Graph metadata extraction.

Fallback screenshot upload when social previews are unavailable.

Integrations:

Pinterest widgets and save buttons.

Google Calendar later.

Google Maps Places for venues and destinations.

Resend for email.

Twilio for optional SMS reminders.

Stripe reserved for future payment workflows.

AI:

Claude for product guidance, copy, summaries, wedding planning intelligence, prompt templates.

OpenAI or Anthropic API depending on app architecture.

Vector storage later for document search and workspace memory.

Hosting:

Vercel for app deployment.

Supabase cloud for database and storage.

Liveblocks cloud.

Clerk cloud.

22. Link Preview Requirements

Users should be able to paste links from:

Pinterest.

Instagram.

TikTok.

YouTube.

Vendor websites.

Wedding blogs.

Google Maps.

Venue pages.

Catering menus.

Attire websites.

Travel sites.

Hotel websites.

Airline pages.

PDF links.

Implementation rules:

Fetch server side.

Extract title, description, image, source domain, favicon, author if available.

Store canonical URL.

Store raw metadata.

Generate screenshot fallback only when legally and technically appropriate.

Allow manual title and image override.

Allow upload screenshot as fallback for social platforms with limited preview support.

Respect platform terms. Do not scrape private or protected content.

23. Security Requirements

Data is sensitive. Weddings include addresses, family relationships, budgets, contracts, phone numbers, travel plans, and private documents.

Requirements:

Role based access control.

Row level security.

Workspace isolation.

Signed upload URLs.

Private file buckets.

Audit log for sensitive actions.

No public guest pages in version one.

No vendor access in version one.

MFA encouraged for planner accounts.

Delete workspace flow.

Export workspace data.

Privacy settings for each module.

Support access only with explicit temporary user consent.

24. Accessibility Requirements

Target WCAG 2.2 AA.

Requirements:

Keyboard navigable board controls.

Accessible drag and drop alternatives.

Screen reader labels.

Color contrast compliance.

Reduced motion option.

Touch friendly mobile controls.

Clear focus states.

Captions for video previews when available.

Form validation messages.

No critical information conveyed by color alone.

25. Mobile Requirements

Mobile collaboration is required at launch.

Mobile users must be able to:

View board.

Add link.

Upload image.

Comment.

Vote.

Approve decision.

Complete task.

View budget.

Add guest.

Update vendor status.

View timeline.

Receive notifications.

Invite collaborator.

Mobile board editing can be simplified, but it cannot be read only.

Suggested mobile board behavior:

Cards in spatial canvas on tablet.

Stacked board sections on phone.

Pinch zoom where possible.

Long press for item actions.

Floating add button.

Bottom sheet for item details.

26. Version One Scope

Version one should include:

Account creation.

Workspace creation.

Editable partner labels.

Collaborator invitations.

Roles and permissions.

Onboarding questionnaire.

Board first workspace.

Drag and drop board.

Link previews.

Pinterest support.

Image and PDF upload.

Comments and mentions.

Votes and approvals.

Decision log.

Budget tracker.

Vendor tracker.

Guest manager.

Timeline.

Document storage.

Optional honeymoon module.

Email notifications.

Basic AI categorization and summaries.

Mobile responsive collaboration.

Do not include in version one:

Public wedding website.

Vendor marketplace.

Vendor portal.

Direct payment processing.

Registry commerce.

Automated vendor outreach.

Full offline editing.

Native iOS or Android app.

Complex seating chart engine.

Legal advice.

27. Version Two Scope

Possible version two features:

Guest facing wedding website.

RSVP form.

Digital save the dates.

Digital invitations.

Guest messaging.

Seating chart.

Vendor portal.

Payment reminders.

Invoice upload and extraction.

Contract extraction.

Stripe payments.

Planner client dashboard.

Planner templates.

Workspace duplication.

Wedding website themes.

Registry links.

Weather monitoring.

Travel document reminders.

Room block management.

QR code guest check in.

28. Planner Mode

Planner mode should allow a professional planner to manage multiple weddings.

Features:

Planner dashboard.

All client workspaces.

Upcoming deadlines across weddings.

Client activity.

Templates.

Reusable checklist sets.

Vendor notes.

Timeline templates.

Budget templates.

Board templates.

Client invite flow.

Planner branding later.

Planner mode should be included structurally in version one but can be lightly implemented.

29. Screens To Build First

1. Landing page placeholder.
2. Sign up and sign in.
3. Create workspace.
4. Onboarding questionnaire.
5. Home dashboard.
6. Main board.
7. Board item detail drawer.
8. Add item flow.
9. Poof conversion menu.
10. Vendor tracker.
11. Budget tracker.
12. Guest manager.
13. Timeline.

- 14. Decisions.
- 15. Documents.
- 16. Honeymoon optional module.
- 17. Members and permissions.
- 18. Settings.

30. Acceptance Criteria For MVP

A couple can create a wedding workspace.

They can edit partner labels.

They can invite a planner.

They can paste a Pinterest or vendor link onto the board.

The board creates a preview card.

They can drag and organize the card.

They can comment on the card.

They can vote on the card.

They can approve the card.

They can convert the card into a vendor, task, budget item, or decision.

They can track at least ten vendor categories.

They can create a budget with categories and estimated costs.

They can add guests and households.

They can create timeline tasks.

They can upload a contract PDF.

They can use the product on mobile and desktop.

Permissions prevent unauthorized access.

Workspace data is isolated.

The product feels calm, beautiful, and emotionally aligned with the brand.

31. Claude Build Responsibilities

Claude should own:

Product copy.

Onboarding question wording.

Planning stage logic.

Checklist templates.

Wedding timeline templates.

AI prompt templates.

Vendor category taxonomy.

Budget category taxonomy.

Decision framework.

User journey refinement.

Empty states.

Notification copy.

Error state copy.

Brand voice.

Planner guidance.

Acceptance criteria.

Claude should generate JSON templates for:

Default boards.

Default tasks.

Default budget categories.

Default vendor categories.

Default document folders.

Default onboarding paths.

Default decision types.

Default honeymoon sections.

32. Codex Build Responsibilities

Codex should own:

Next.js project setup.

Database schema.

Supabase configuration.

RLS policies.

Clerk authentication.

Organization setup.

Role permissions.

Liveblocks setup.

Board UI.

Drag and drop.

Real time collaboration.

File upload.

Link preview endpoint.

Board item conversion logic.

Budget CRUD.

Vendor CRUD.

Guest CRUD.

Timeline CRUD.

Decision CRUD.

Document CRUD.

Notification system.

Responsive mobile UI.

Testing.

Deployment pipeline.

Environment variables.

API routes.

Seed data.

33. Suggested Development Phases

Phase One: Foundation

Auth, workspace, roles, database, design system, app shell.

Phase Two: Board

Canvas, cards, drag and drop, link previews, uploads, comments, presence.

Phase Three: Planning Core

Budget, vendors, guests, timeline, documents.

Phase Four: Conversion Layer

Poof actions from board item to vendor, task, budget item, decision, document, or honeymoon item.

Phase Five: Collaboration

Mentions, notifications, approvals, activity feed, mobile refinements.

Phase Six: AI Assist

Categorization, summaries, timeline suggestions, budget risk insights.

Phase Seven: Polish

Branding, animations, empty states, accessibility, security review, testing.

34. Open Product Questions

1. Should the first real user be only your own wedding workspace, or should the first build include account structures for multiple weddings immediately?

Recommendation: include multi workspace architecture now, even if the first actual workspace is yours.

1. Should family contributors see the whole budget or only their contribution areas?

Recommendation: permissions should allow category level budget visibility.

1. Should the product support cultural and religious ceremonies as first class events?

Recommendation: yes. This is a quiet but meaningful differentiator.

1. Should “The Missing Piece” include a private vows or letters section?

Recommendation: yes, but keep it private and separate from logistics. This ties the product to the manuscript and gives the brand soul.

1. Should the product include conflict reducing features for family decisions?

Recommendation: yes later. Version one should include decision ownership, voting, and final approver rules.

1. Should the product support planner templates?

Recommendation: yes structurally, but ship simple templates first.

35. Strong Product Opinion

Do not let this become a bloated wedding operating system too early.

The product wins if the board feels magical and the planning tools feel inevitable.

The core loop is:

Collect inspiration.

Organize it.

Discuss it.

Approve it.

Poof it into the real plan.

Track it until done.

That loop is the product.
